Type of Incident:

Injury

Description of Animal:

Breed: Labrador Retriever

Animal Name:

Tamara

Description of Incident:

Upon arrival on flight 1091, the dog was found loose in the belly of the A/C. The dog had chewed through the kennel and came out of the kennel. There was lots of blood on the outside of the kennel and the inside as well. I could not see any cuts on the face or paws. I am not sure if the blood was coming from her gums or tongue. I helped retrieve the dog from the belly of the A/C and I then brought the dog back to cargo. The dog was taken to the vet for a follow-up. I am waiting for confirmation on the status of the dog.

Cause of Incident:

The animal was taken to Animal Hospital. The dog had bitten through her travel crate lacerating her tongue and gingival areas of the oral cavity. Xrays were taken. Antibiotics were given and release on 1/31/2020

Description of Incident:

Dog arrived on the morning of 27th Jan from HNL, the dog was planned stop for comfort stop. The dog was returned at approx. 1234pm/27th Jan, the dog was in the kennel and it was not bleeding at that time per the acceptance clerk. At approx. 1448 we received a call from Ramp MOD and was advised that the dog was bleeding. We recovered the dog and transported it to the Vet approx. 1545/1600.

Cause of Incident:

Vets finding - 01-27-2020 6:22:59pm, Overall, the dog does not appear young or particularly thrifty, but a source for the bleeding has not been found. Recommended bloodwork, coags and overnight observation. If her labs are normal and the bleeding does not reoccur, she should be able to return to boarding or continue her travels. Otherwise, will plan to pick up tomorrow morning. Animal completed travel on 1-28-2020
