
DOMESTIC AIRFARE CONSUMER REPORT

First Quarter 2026 Passenger and Fare Information

September 2026

U.S. Department of Transportation
Office of Aviation and International Affairs
Office of Aviation Analysis

The U.S. Department of Transportation's Office of Aviation Analysis publishes the Domestic Airfare Consumer Report every quarter using data submitted to the Bureau of Transportation Statistics by commercial airlines. The primary purpose of this report is to provide the traveling public with quarterly information for domestic airline prices and to identify market trends. The city market airfare and passenger data is provided in seven different table formats described in detail below. Pricing information is available for nearly 7,000 domestic city-pair markets across the 48 contiguous states.

The average fares in this report reflect the each-way prices paid by all passengers on domestic commercial airlines. These averages include first-class tickets, taxes, and airport fees. However, they exclude free tickets, such as frequent flyer rewards, as well as ancillary charges such as baggage, seat upgrades, and change fees.

Because airline prices fluctuate constantly, these reported averages likely won't match current ticket prices. However, they remain useful for comparing costs between airlines and different city markets. Note that in markets with high average fares, cheaper fares are usually limited and heavily restricted, meaning travelers must search harder to find a bargain.

Table 1 of this report covers the 1,000 largest city-pair markets in the 48 contiguous states. For each of the 1,000 largest city-pair markets, Table 1 lists the number of each-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares vary from carrier-to-carrier. In some instances, this reflects differences in service, such as connecting versus nonstop service, or service to different airports in the same city-pair market. Note that the "lowest fare carrier" is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the "market average" fare will be lower than the fare for the "lowest fare carrier" because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often, they charge lower average fares than individual carriers with greater market shares.

Table 1a, too large to include in this report, is available exclusively in the DOT DataHub ([Table 1a DataHub](#)). Table 1a is an expanded version of Table 1 – which lists only the top 1,000 largest city-pair markets – that breaks out markets by specific airport-pairs averaging at least 10 passengers daily. It provides airport-pair market information for cities that have multiple airports at either the origin or destination of the trip, such as Chicago's O'Hare (ORD) and Midway (MDW) airports.

Table 2 summarizes the data by city. This table provides a city-level summary of the top 1,000 city-pair markets, restricted to cities with more than 100,000 passengers. Sorted by distance, the table's columns display the number of top markets associated with each city, total inbound and outbound passengers, average fare, average fare per mile (yield), and average distance traveled.

Tables 3 and 4 highlight markets with significant year-over-year changes in average fares. Table 3 shows markets with large fare increases, while Table 4 details those with large decreases. Both tables provide each market's average fare and total passenger count, along with the absolute and percentage changes for both metrics.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 in the report.

Table 6 is an expanded version of Table 1, detailing all 6,313 city-pair markets that averaged at least 10 daily passengers during the first quarter of 2026. As it is too large to include in this report, it is available exclusively online. You can access the table by clicking the link for [Table 6 DataHub](#).

Table 7 details the average fare premiums for airports, based on data from all city-pair markets that averaged more than 20 daily passengers. The table illustrates the impact of hub domination and low-fare service by calculating a passenger-weighted average price for a city-pair involving a specific airport and benchmarking it against the national average for all other domestic city-pairs. To provide deeper context, the table tracks the **% Fare Premium** (the percentage difference between the local airport's city-pair market fares and a calculated national benchmark of all other city-pairs) and the share of **Passengers in Low-Fare Markets** (the percentage of travelers flying on routes with low-cost carrier competition).

Footnotes and a key for carrier codes used in this report can be found at the end of the report. Telephone inquiries should be referred to (202) 366-2347.

In addition to the *Domestic Airfare Consumer Report*, the Department publishes a monthly *Air Travel Consumer Report* that covers service quality elements such as flight delays, mishandled baggage, oversales, and consumer complaints. For more resources, or to file a complaint against an airline or ticket agent, please visit the website of the Department's Office of Aviation Consumer Protection (OACP), a unit within the Office of the General Counsel, at: www.transportation.gov/airconsumer.

Table 5 (abridged):
Detailed Fare Information for Highest and Lowest Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$290. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$185 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares.

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare interval. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, Delta flew 7,736 passengers between Cleveland, OH and Minneapolis/St. Paul, MN, or 40% of market passengers, at an average fare of \$414 each way. The Minimum \$25 Fare Interval for this carrier between these two cities is \$250; and the percentage of passengers in that interval was 7%. This means that 7% of Delta's passengers in this market paid between \$226 and \$250 each way. The \$226 and \$250 fare interval was the lowest in which at least five percent of Delta's passengers flew. Delta's Maximum \$25 Fare Interval is listed as \$525; the percentage of passengers in that interval was 5%. This means that 5% of Delta's passengers in this market paid between \$501 and \$525 each way. The \$501 and \$525 fare interval was the highest in which at least five percent of Delta's passengers flew. In this market, 1 percent of Delta's passengers paid more than \$750 each way (three times \$250, the top of the lowest significant fare interval for Delta in this market).

DL	Delta Air Lines Inc.	WN	Southwest Airlines Co.
F9	Frontier Airlines Inc.	XP	Avelo Airlines
G4	Allegiant Air		
HA	Hawaiian Airlines Inc.		

Data Source:

The Passenger Origin-Destination (OD) Survey provides data on airline ticket pricing, passenger volumes, and trip routing. Until July 2025, this quarterly survey collected a 10% sample from domestic certificated airlines operating aircraft with more than 60 seats. As of July 2025, the survey covers all domestic certificated and commuter air carriers, utilizes a 40% sample size, and introduces new reporting rules. For more information about the newly expanded survey, please visit: [OD DB1C](#).

Airfare Details:

Airfares in this report reflect the total amount collected for a ticket. This includes all ticket taxes and mandatory fees imposed by airlines, but excludes optional ancillary fees not required to board the plane, such as baggage fees and seat upgrades. These total fares are broken down by specific OD markets. An OD market represents the passenger's true starting point and destination, regardless of any layovers or connections, and accounts for travel in both directions. For itineraries with multiple destinations, such as a round-trip ticket, the total ticket airfare is prorated across each OD market based on flight distance and the ticketed passenger is counted once for each direction of travel in the OD market.

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.

4/ Low fare markets defined as airport markets where one or more of (Allegiant Air (G4), Breeze Airways (MX), Frontier Airlines Inc. (F9), JetBlue Airways (B6), Southwest Airlines Co. (WN), Spirit Air Lines (NK), Sun Country Airlines (SY), Avelo Airlines (XP)) have a combined airport market share of at least 5%.
