
DOMESTIC AIRLINE FARES CONSUMER REPORT

Third Quarter 1997 Passenger and Fare Information

April, 1998

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997. This is the fifth report, and is based on data for the third quarter of 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. This report includes the top 1,000 city-pair markets for the third quarter of 1997, plus 149 additional city pairs that have been in the top 1,000 during previous quarters covered by this report series.

Tables 1 through 4 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of fares in individual markets.

For each market, Table 1 lists the number of one way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. It therefore covers first class fares paid to carriers offering such service but it does not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allows consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get low price service. Advice laid out in the fact sheet prepared by the Departments Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at:
<http://www.dot.gov/ost/ogc/subject/consumer/aviation/publications/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the “lowest fare carrier” because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 9 for Burbank), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

This quarter’s special feature provides more detailed passenger and fare information for the ten city-pair markets under 1,000 miles with the highest average fares for the third quarter of 1997.

A key for carrier codes used in this report and footnotes can be found at the end of the report. Also attached is an amendment to the second quarter 1997 report containing data unintentionally omitted from the original report.

This report is also available at (<http://www.dms.dot.gov/ost/aviation/>). Telephone inquiries should be referred to (202) 366-1032.

Special Feature
Detailed Fare Information for Ten City-Pairs
Under 1,000 Miles with the Highest Average Fares

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. This feature focuses on markets with high average fares where consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for the ten city-pairs under 1,000 miles that were identified as having the highest average fare levels in the third quarter of 1997. The average fares in these markets ranged from \$271 to \$302 (one-way). Fare and passenger information is provided for both the entire city-pair market as well as for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this special feature.

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets we have collected data by \$25 fare intervals and show four categories. The least expensive \$25 fare interval available to at least five percent of passengers is listed under the column heading *Minimum \$25 Fare Interval*, along with the percentage of the competitor's passengers that flew in that fare interval.¹ The same information is provided for the \$25 fare interval *below* the average fare in which the largest percentage of passengers flew, the \$25 fare interval *above* the average fare in which the largest percentage of passengers flew, and the most expensive \$25 fare interval in which at least five percent of passengers flew. Data listed under the carrier "Total" is data for the entire market.

The data demonstrates the large disparity between fares paid in markets with high average fares. In the Charlotte to Houston market, for example, six percent of passengers paid fares as low as \$51-\$75 one-way; seven percent of passengers in the market paid over seven times that amount-- \$526-\$550 each way. Fare disparity is an indication of an airline's ability to price discriminate within a market. Price discrimination is the practice of maximizing revenues by charging passengers different fares based on the passengers' willingness to pay for the specific service required. Certain passengers, such as business travelers, will be willing to pay higher travel costs in order to travel in a particular market

¹ The fare listed is the top of the \$25 fare increment. For example, United Airlines Minimum Fare Level between Allentown and Chicago is \$125; the percent of passengers in that interval is 12 percent. This means that 12 percent of United's passengers in this market flew at fares between \$101 and \$125.

at a particular time, with a large degree of flexibility to change their travel arrangements. For this reason, the number of low-fare seats (usually with substantial restrictions) available on each flight is limited using sophisticated revenue management systems so that potential high-fare customers will not be diverted into low-fare seats. The fewer substitutes (competing air service) in a market, the greater an airline's ability to price discriminate. Note that seven out of the ten markets examined are served by only one competitor.

It is the Department's intention to continue exploring ways to make valuable fare detail available to consumers in markets with highly disparate fares, particularly markets with high average fares. One option being considered is making a table similar to this special feature a permanent addition to the Consumer Air Fare Report. The decision to include such a table regularly is dependent on the usefulness of the information to consumers and users of this report.

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten percent sample of passenger tickets. Information in this report extracted from DB1A, using directional components of domestic itineraries (fares passengers only).

- 1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.
- 2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.
- 3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
- 4/ Pan American Airways has recently changed its official code from OP to PA. The code used in the tables of this report is the code under which the data was reported.
