
DOMESTIC AIRLINE FARES CONSUMER REPORT

Fourth Quarter 1997 Passenger and Fare Information

June, 1998

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an [Air Travel Consumer Report](#) that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997. This is the fifth report, and is based on data for the fourth quarter of 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. This report includes the top 1,000 city-pair markets for the third quarter of 1997, plus 165 additional city pairs that have been in the top 1,000 during previous quarters covered by this report series.

Tables 1 through 4 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of fares in individual markets.

For each market, Table 1 lists the number of one way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. It therefore covers first class fares paid to carriers offering such service but it does not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allows consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Departments Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at:

<http://www.dot.gov/ost/ogc/subject/consumer/aviation/publications/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus

nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the ‘lowest fare carrier” because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 9 for Burbank), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

This quarter's Special Feature provides a brief overview of the state of low-fare competition in the U.S. domestic airline industry.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. This report is also available at (<http://dms.dot.gov/ost/aviation/>). Telephone inquiries should be referred to (202) 366-1032.

Special Feature

State of Low-Fare Competition in the U.S. Domestic Airline Industry, 1997

This Special Feature provides a brief examination of the state of low-fare competition since the publication of the April 1996 study, *The Low Cost Airline Service Revolution*.

Passengers

In 1997, approximately 120 million passengers, or 39.4 percent of passengers in U.S. domestic markets, flew in markets that receive low-fare competitive service.¹ Approximately half of those passengers were transported by a low-fare carrier. The absolute number of passengers in low-fare markets has declined since its peak in 1996. As a percent of total passengers, the low-fare market passenger figure in 1997 was below 1995 levels.

Markets

In spite of the smaller number of passengers in low-fare markets, low-fare carriers have continued to make inroads into a greater number of markets. In 1997, there were 18,717 domestic origin & destination markets.² Six percent of those markets, or 1,115, received competitive service from a low-fare carrier. This number is up from 1996, when only 984 markets had low-fare competition. The increasing number of markets with low-fare competition was largely due to new low-fare entry into markets that are traveled by 50 or fewer passengers each day. Conversely, the number of very dense markets receiving competitive low-fare service dropped back toward 1995 levels. These two factors combined have resulted in fewer passengers in a greater number of markets with low-fare competition.

¹ Low-fare carriers considered include: ProAir, Air South, AirTran, American Trans Air, Carnival, Frontier, Kiwi, Morris Air, Nationsair Express, People's Express, Reno, Southwest, Spirit, Tower Air, Valujet, Vanguard, and Western Pacific. Competitive service is defined as at least ten percent of market share.

² An origin and destination market is defined as any city-pair market in which at least one passenger flew per day.

Number of Markets with Low-Fare Competition, By Market Density

Date	0-20 Pax/Day	21-50 Pax/Day	51-100 Pax/Day	101-200 Pax/Day	201-500 Pax/Day	Over 500 Pax/Day	Total
1993	67	87	83	84	76	101	498
1994	144	112	118	101	101	148	724
1995	196	141	153	151	160	189	990
1996	175	132	135	153	168	221	984
1997	273	157	146	162	174	203	1,115

Average Fares

Markets with competitive low-fare service continue to experience substantially lower fares, on average, than markets that don't have such competition. The average fare differential is most significant in short-haul markets, where low-fare carriers have historically tended to concentrate service. In city-pair markets between 251 and 500 miles, for instance, average fares in markets without low-fare competition are 121 percent higher than fares in markets with such competition.

Average Fares in Markets with and without Low-Fare Competition, 1997

Market Type	Mileage Block						
	0-250	251-500	501-750	751-1000	1001-1500	1501-2000	Over 2000
Without Low-Fare Competition	\$ 142	\$ 165	\$ 171	\$ 167	\$ 179	\$ 198	\$ 223
With Low-Fare Competition	\$ 67	\$ 75	\$ 101	\$ 121	\$ 133	\$ 163	\$ 176
% Difference	111%	121%	70%	38%	35%	22%	27%

Average fares in markets with and without low-fare competition increased between 1996 and 1997. Average fares in markets without low-fare competitive service rose 1.7 percent compared to an increase of almost 10 percent in markets with such competition. In spite of accelerated average fare increases in markets with low-fare competition, average fares in markets without such competition were still 80 percent higher than the average fares in markets with low-fare competition.

Average Fares in Markets with and without Low-Fare Competition

Market Type	1994	1995	1996	1997
Without Low-Fare Competition	\$ 168	\$ 183	\$ 177	\$ 180
With Low-Fare Competition	\$ 86	\$ 95	\$ 91	\$ 100
% Difference	97%	92%	93%	80%

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten percent sample of passenger tickets. Information in this report extracted from DB1A, using directional components of domestic itineraries (fares passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.

4/ Pan American Airways has recently changed its official code from OP to PA. The code used in the tables of this report is the code under which the data was reported.
