
DOMESTIC AIRLINE FARES CONSUMER REPORT

Second Quarter 1999 Passenger and Fare Information

February, 2000

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997. This is the twelfth report, and is based on data for the second quarter of 1999.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. This report includes the top 1,000 city-pair markets for the fourth quarter of 1998, plus 229 additional city pairs that have been in the top 1,000 during previous quarters covered by this report series.

Tables 1 through 5 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of the effect of low-fare service on fares.

For each market, Table 1 lists the number of one-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. They therefore cover first class fares paid to carriers offering such service but do not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allow consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Department's Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at:
<http://www.dot.gov/ost/ogc/subject/consumer/aviation/publications/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged.

Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the ‘lowest fare carrier’ because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 10 for Burbank), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 itself.

This quarter's special feature examines how the percentage of major network carrier passengers paying very low and very high fares changes in the presence of low-fare competition.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. This report is also available at <http://ostpxweb.dot.gov/aviation>. Telephone inquiries should be referred to (202) 366-1032.

Table 5 (abridged):
Detailed Fare Information for Highest- and Lowest-Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$200. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$60 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares. The same data for all markets covered in this report can be found on the Internet at <http://ostpxweb.dot.gov/aviation> under "What's Hot."

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare increment. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, American Airlines flew 17,520 passengers between Chicago and White Plains, NY, or 36% of market passengers, at an average fare of \$319. American's *Minimum \$25 Fare Interval* between Chicago and White Plains, NY is \$75; the percent of passengers in that interval was five percent. This means that five percent of American's passengers in this market paid between \$51 and \$75 each way. The \$51 to \$75 fare interval was the lowest in which at least five percent of American's passengers flew. American's *Maximum \$25 Fare Interval* is listed as \$575; the percentage of passengers in that interval was twelve percent. This means that twelve percent of American's Chicago-White Plains passengers paid between \$551 and \$575 each way. The \$551 to \$575 fare

interval was the highest in which at least five percent of American's passengers flew. Fifty-nine percent of American's passengers paid more than \$225 each way (three times \$75, the top of the lowest significant fare interval for American in this market).

Special Feature

Price Discrimination in the Presence of Low-Fare Competition

The fares that passengers pay to fly on network airlines are generally determined by sophisticated yield management systems. These systems use past flight data and current booking information to estimate the demand for a particular flight, and then distribute seats into different fare classes accordingly. Fare classes are subject to a variety of conditions. For example, tickets in the most expensive fare class are usually the ones that can be bought at the very last minute and carry no restrictions. Conversely, some fare classes are characterized by heavy restrictions such as a Saturday night stay and a 3-week advance purchase requirement. Passengers that find those restrictions acceptable enjoy the lowest fares if seats are available in that particular fare class. In between the two extremes is a range of fare classes that entail varying levels of restrictive provisions.

Yield management systems attempt to maximize the airline's revenue by allocating each seat to the highest-revenue fare class possible. Yield management systems allow airlines to constantly adjust seats available at any given fare based on real-time changes in demand for every flight. If the number of seats available in a market is limited relative to demand, and in the absence of an effective price competitor, the airline will be able to sell so many seats in the fare classes associated with high fares that relatively few seats will be offered at low prices in restrictive fare classes. The presence or absence of low-fare competition is an important factor affecting the number of seats made available to passengers who desire to use lower-level fares.

In order to determine how the allocation of network airline seats differs in markets with low-fare carrier competition versus those without low-fare competition, we have counted individual carrier passengers that paid very high and very low fares in the top-1,000 short-haul markets. We then divided the markets into groups with and without low-fare competition.¹ The results can be seen on the attached table.

As shown, network carriers sell a larger percentage of seats at low fares when faced with low-fare competition. In most instances, the difference is quite large. For the second quarter of 1999, US Airways, for example, sold 73% of its seats for below \$75 each way when competing with a low-fare carrier; only 20% of US Airway's tickets were sold for under \$75 when a low-fare competitor was not present. Similarly, the absence of a low-fare competitor translated into a higher percentage of passengers flying at greater than \$300 each way for all the carriers examined.

One apparent exception to the overall pattern of more price discrimination in non-low-fare markets is United Airlines. United carried the same percentage of passengers at the over \$300 fare in both types of markets, and the variance between proportion of passengers flying at very low fares in the two types of markets was not great relative to many of the other carriers examined. A closer inspection of United's short-haul markets reveals that many of the city-pairs classified as non-low-fare have substitute markets that are served by Southwest Airlines, a low fare carrier. Specifically, many of United's 'non-low-fare' markets include San Francisco, which is disciplined heavily by Southwest's service not only into San Francisco but also into nearby Oakland. United appears to have made seats available at low fares in the San Francisco to Las Vegas, Burlington CA, Ontario CA, Reno, and Santa Barbara markets as if they were price discriminating in low-fare markets, because Southwest served each of those cities from Oakland.

The impact that mix can have on average fares is evident from this data. For instance, low fares are obviously available in American Airlines' non-low-fare short-haul markets, as 20% of American's customers in those markets flew for less than \$75 each way. However, over twice the proportion of

¹ Includes all markets under 500 miles nonstop in the top 1,000+ for the 2nd quarter of 1999. Low-fare markets are defined as city-pairs in which a low-fare carrier held at least 10% of the passenger market share.

American passengers in low-fare markets was sold seats at less than \$75. While the lowest fare available in these two market sets might have been comparable, the mix of seats sold at that low fare level was markedly different. As a result, the average fare for non-low-fare markets was 31% higher than the average fare in low-fare markets.

This exercise illustrates the need for consumers to be particularly vigilant when searching for low fares in markets without low-fare competition. Low fares are offered in these markets, but limited availability makes them harder to obtain. When a market has a high average fare, it is usually an indication that a wide range of fares is offered, and that low fare seats are not widely available. As we mention in the introduction to this report, the Department's Aviation Consumer Protection Division offers a fact sheet entitled *Getting the Best Air Fare* that offers consumer advice on the subject. The fact sheet can be obtained by calling (202) 366-2220 or via the Internet at <http://www.dot.gov/ost/ogc/subject/consumer/aviation/publication/bestfare.html>.

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten- percent sample of passenger tickets. Information in this report extracted from DB1B, using directional components of domestic itineraries (fared passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
