
DOMESTIC AIRLINE FARES CONSUMER REPORT

Second Quarter 2000 Passenger and Fare Information

December 2000

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997. This report is based on data for the second quarter of 2000.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. This report includes the top 1,000 city-pair markets for the second quarter of 2000, plus 267 additional city pairs that have been in the top 1,000 during previous quarters covered by this report series.

Tables 1 through 5 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of the effect of low-fare service on fares and passenger traffic.

For each market, Table 1 lists the number of one-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. They therefore cover first class fares paid to carriers offering such service but do not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allow consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Department's Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at:

<http://www.dot.gov/ost/ogc/subject/consumer/aviation/publications/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the ‘lowest fare carrier’ because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 10 for Burbank), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 itself.

This quarter’s special feature looks at the effects of new entrant JetBlue’s service between Buffalo and JFK International Airport in New York on traffic at the other two New York City airports – LaGuardia and Newark.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. This report is also available at <http://ostpxweb.dot.gov/aviation>. Telephone inquiries should be referred to (202) 366-1032.

Table 5 (abridged):
Detailed Fare Information for Highest- and Lowest-Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$200. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$70 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares. The same data for all markets covered in this report can be found on the Internet at <http://ostpxweb.dot.gov/aviation> under "What's Hot."

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare increment. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, American Airlines flew 18,490 passengers between Chicago and White Plains, NY, or 38% of market passengers, at an average fare of \$340. American's *Minimum \$25 Fare Interval* between Chicago and White Plains, NY is \$125; the percent of passengers in that interval was eleven percent. This means that eleven percent of American's passengers in this market paid between \$101 and \$125 each way. The \$101 to \$125 fare interval was the lowest in which at least five percent of American's passengers flew. American's *Maximum \$25 Fare Interval* is listed as \$600; the percentage of passengers in that interval was seven percent. This means that seven percent of American's Chicago- White Plains passengers paid between \$576 and \$600 each way. The \$576 to \$600 fare interval was the highest in which at least five percent of American's passengers flew. Forty-five percent of American's passengers paid more

than \$375 each way (three times \$125, the top of the lowest significant fare interval for American in this market).

Special Feature

JetBlue's Effect on the New York City - Buffalo Market

The data provided in the Domestic Consumer Air Fare Report is not airport specific, but rather aggregated by markets. For example, traffic between Chicago-Midway and Los Angeles is added to traffic between Chicago-O'Hare and Los Angeles to represent all Chicago-Los Angeles traffic. Generally, low-fare entry into one airport in a multiple-airport city will result in lower fares in the market as a whole. This Special Feature examines the effects of JetBlue entry into the New York City – Buffalo market on Buffalo service at each of New York's three airports – JFK International Airport (JFK), LaGuardia, and Newark.

JetBlue

In February 2000 JetBlue, a new entrant airline, began service out of slot-constrained JFK in New York City. JetBlue bills itself as a discount airline. Its modern fleet of Airbus A320s, ticketless travel, and minimal in-flight service help control costs. Only coach service is available; passengers are not required to pay disproportionately more for one-way travel or more for trips in which they are not staying over at their destination for a Saturday night.

JetBlue currently provides service to twelve domestic destinations. In the northeast, JetBlue hubs out of JFK International Airport and flies to Buffalo, Rochester, and Burlington, VT. From JFK, JetBlue also provides nonstop service to five Florida destinations as well as Salt Lake City, UT, Oakland, CA, and Ontario, CA. JetBlue's website lists one-way prices from JFK to northeastern destinations of between \$49 and \$99; JFK to Florida fares range from \$79 to \$179; West coast fares range from \$129 to \$249; and JFK to Salt Lake City fares range from \$99 to \$249.

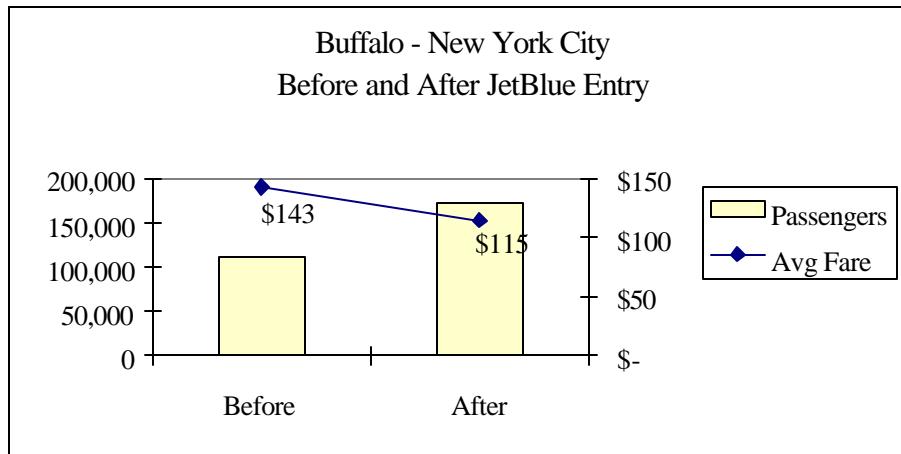

For the period covered in this report, JetBlue had only implemented service to two Florida destinations and Buffalo. We have chosen to examine the Buffalo market in more detail, as discretionary Florida markets usually already have relatively competitive fares. At the start of the second quarter of 2000, JetBlue had three daily nonstops to Buffalo, and added two additional daily flights over the course of the quarter. All of JetBlue's passengers in the market paid less than \$125 each way. Over one-half of JetBlue's 55,680 passengers in the market paid between \$51 and \$75.

The differing strategies of the dominant carriers at the three New York airports demonstrate the full spectrum of potential competitive responses to new entry. At Newark, a Continental network hub, Continental did not attempt to compete for the low-fare traffic targeted by JetBlue. Rather, it reduced the number of lower-fare seats—possibly in order to reallocate those seats to higher-revenue flow traffic over the hub. US Airways at LaGuardia took a moderated approach—adjusting traffic mix slightly to accommodate greater low-fare demand — that resulted in a slight passenger increase and a drop in fares of 11%. JetBlue's most direct

competitor—American Airlines out of JFK – increased low-fare availability greatly and tripled its own traffic in the process.

Overall Effect

As a whole, traffic levels in the Buffalo – New York City market increased by 54% from 112,610 passengers to 173,110 passengers after JetBlue’s entry.. Average one-way fares dropped simultaneously from \$143 each way to \$115, a 20% decline.

Newark – Buffalo (Chart 1- attached)

Continental maintains a network hub at Newark and therefore provides almost all service between Newark and Buffalo. When JetBlue began service out of JFK, Continental’s traffic levels between Newark and Buffalo dropped by 26%. The majority of traffic lost was at the lower fare levels equivalent to those of JetBlue. Continental’s non-restricted fares increased slightly. The loss of low-fare traffic and the increase in high-end fares resulted in an average fare increase for Continental of 23% in the Newark-Buffalo market.

LaGuardia – Buffalo (Chart 2 - attached)

US Airways is the primary service provider between LaGuardia and Buffalo. US Airways traffic increased by only six percent after JetBlue’s entry. Most of the traffic growth at low-fares was the result of a passenger mix adjustment rather than overall capacity increases. US Airways also increased its upper-end fare level.

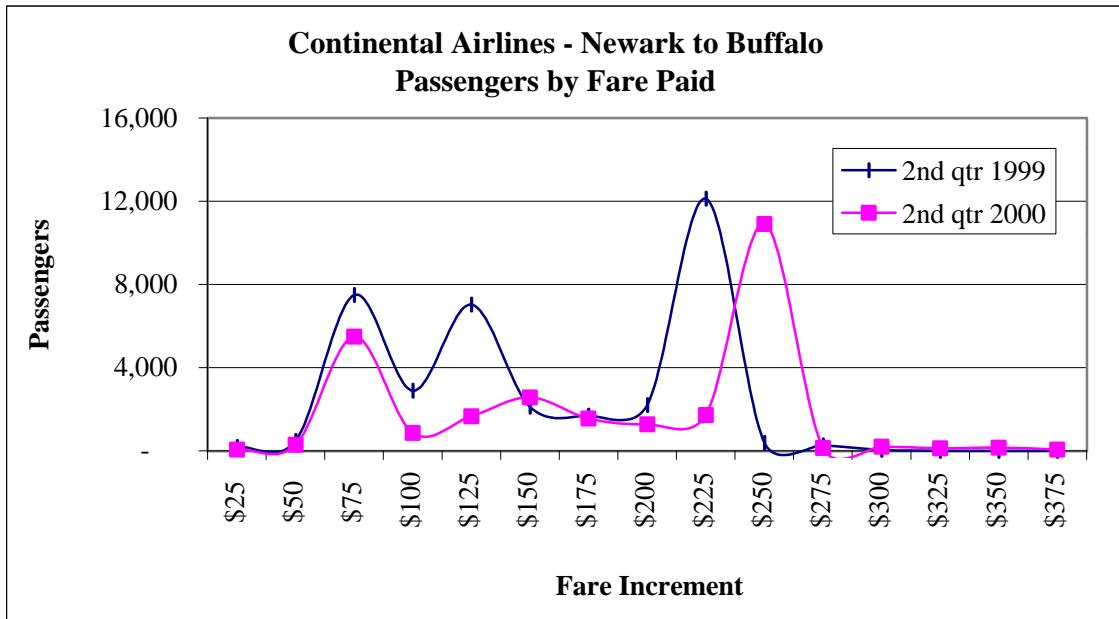

JFK – Buffalo (Charts 3 & 4 – attached)

American Airlines went head-to-head with JetBlue at JFK, with very different results. Prior to JetBlue’s entry, American maintained a passenger distribution with a peak in discount seats between \$100 and \$125 and a peak in less-restrictive fares around \$250. After JetBlue’s entry, American increased the capacity it offered at under \$125 dramatically. American carried

approximately the same number of passengers at fares above \$125 after JetBlue entry as it did before. American traffic tripled and its average fare dropped by a third.

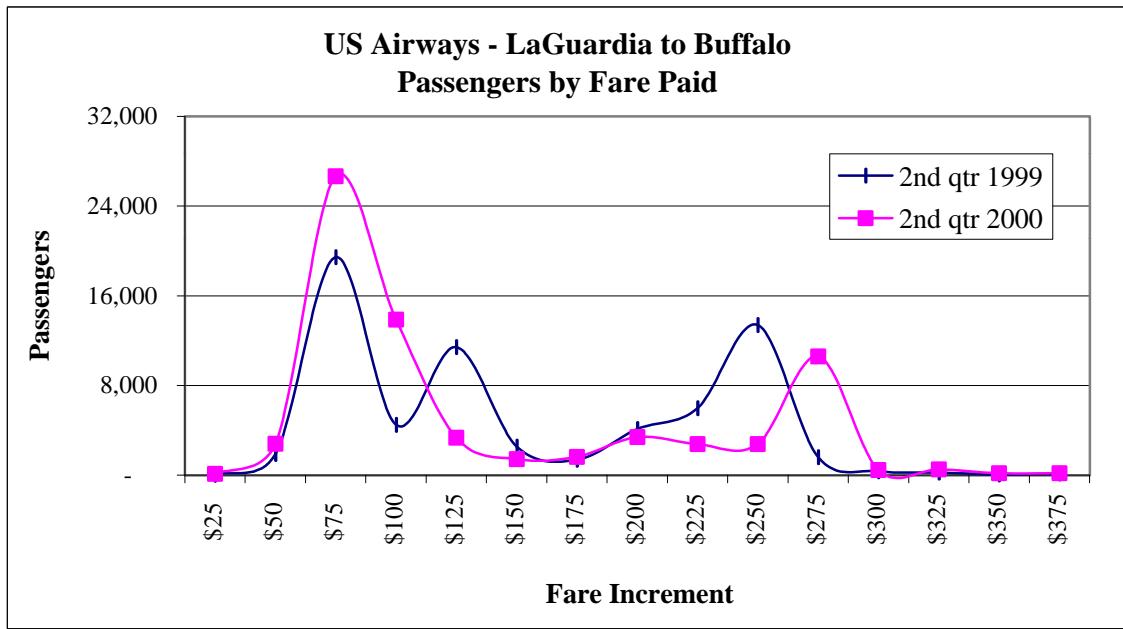

Including JetBlue's passenger data (Chart 4) into the JFK – Buffalo analysis demonstrates the magnitude of discount travel stimulation resulting from increased capacity and lower fares.

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten- percent sample of passenger tickets. Information in this report extracted from DB1B, using directional components of domestic itineraries (fared passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
