
DOMESTIC AIRLINE FARES CONSUMER REPORT

Third Quarter 2000 Passenger and Fare Information

March 2001

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. This report includes the top 1,279 city-pair markets for the third quarter of 2000, plus 279 additional city pairs that have been in the top 1,000 during previous quarters covered by this report series.

Tables 1 through 5 contain the same information as previous reports. As with the other reports, a special feature has been included to provide more in-depth analysis of the effect of low-fare service on fares.

For each market, Table 1 lists the number of one-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. They therefore cover first class fares paid to carriers offering such service but do not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allow consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Department's Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at:

<http://www.dot.gov/ost/ogc/subject/consumer/aviation/publications/bestfare.html>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the ‘lowest fare carrier’ because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000+ that involve each city (e.g., 10 for Burbank), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of more than 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 itself.

This quarter's special feature compares average fares in markets with and without low-fare service to the Standard Industry Fare Level, an algorithm used under regulation to set airfares.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. This report is also available at <http://ostpxweb.dot.gov/aviation>. Telephone inquiries should be referred to (202) 366-1032.

Special Feature

Changes in Pricing since Deregulation

The deregulation of the airline industry has inarguably led to consumer benefits. Overall fares are down since the days of regulation, and travelers enjoy more service to more destinations through the spread of both networks and point-to-point service. However, not all markets have benefited equally from deregulation. In this quarter's Special Feature, we use the Standard Industry Fare Level (SIFL) as an objective benchmark against which to compare average fares paid in markets with and without low-fare competition. This same exercise was done in the Special Feature from the second quarter of 1998. Our findings from that study over two years ago remain largely intact. Markets with low-fare competition have average fares at or below the SIFL level at all distances. Markets without adequate price competition from a low-fare carrier experience average fares below SIFL only in long-haul markets that benefit from connecting service.

With the deregulation of domestic air fares in 1978, the Airline Deregulation Act mandated that the Civil Aeronautics Board establish the Standard Industry Fare Level (SIFL), which was equivalent to the lowest unrestricted coach fare charged in each market under regulation. The SIFL, like regulated fares, is a distance-based formula that the CAB adjusted on a biannual basis to reflect changes in airline operating costs. Before the CAB's domestic fare authority lapsed at the end of 1982, the SIFL cost adjustments were used to establish fare level changes that the airlines could implement without CAB approval. The Department of Transportation has continued to update the SIFL on a biannual basis since the dissolution of the CAB. The Department and others have used the SIFL as a benchmark for comparing changes in fares since deregulation. More detailed information on the SIFL calculations can be found at <http://ostpxweb.dot.gov/aviation> under Domestic Aviation.

Average fares and SIFL have been calculated for three sets of distance-grouped markets: all top 1,000+ domestic city-pair markets, the subset of markets within the top 1,000+ that had low-fare competition¹, and the subset of markets within the top 1,000+ that did not have low-fare competition. The attached chart shows average fares for each set of markets as a percentage of the corresponding SIFL measure. As we have observed in past Special Features, the presence of low-fare competition has an unmistakable impact on the average fare level. The difference is most notable in short-haul markets, where low-fare carriers have historically concentrated service.

When considering the aggregate of all top-1,000 markets the following observations are made:

¹ A low-fare market is defined as one in which a low-fare carrier transports at least ten percent of the Origin and Destination traffic. Low-fare carriers include: AirTran, American Trans Air, Frontier, JetBlue, National Airlines, Pro Air, Reno, Southwest, Spirit, Sun Country, Tower, and Vanguard.

- In top-1,000 markets up to 750 miles, average fares exceed SIFL by varying degrees. They range from 39% above SIFL (in the 0 to 250-mile range) to 3% above SIFL.²
- In top-1,000 markets over 750 miles, average fares fall below SIFL. They range from 70% to 90% of SIFL.

When the top-1,000 markets are divided according to the presence of low-fare competition, however, different trends emerge:

- In markets with low-fare competition average fares were below SIFL in all distance blocks with the exception of the under 250-mile block, where average fares were one percent higher than SIFL. In the two longest distance groupings, average fares were approximately half of SIFL.
- In markets without low-fare competition, average fares of markets that are less than 750 miles are at least 28% above SIFL. In city-pairs under 250 miles, average fares are double SIFL.
- The average fares in the longer-distance categories fall below SIFL, with one exception. In the 1251-1500 mileage block, the average fare is 6% above SIFL. In all other longer-haul categories, fares range from 73% to 95% of SIFL.
- An examination city-pairs in the 1251-1500 mileage block shows that seven of the top ten city-pairs with the highest average fare are Dallas/Ft. Worth markets to either California or the East Coast. A federal restriction called the Wright Amendment prevents Southwest from flying to any of those destinations from its base at Dallas' Love Field, thus limiting the potential for low-fare competition in those city-pairs.

² The components of the SIFL formula are uniformly adjusted to reflect overall changes in the level of operating costs, but not changes in the structure of airline operating costs. Airlines have had much greater freedom in managing costs since deregulation and the relative differences in the costs of operating short distance markets and long distances markets has likely changed.

Table 5 (abridged):
Detailed Fare Information for Highest- and Lowest-Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$200. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$60 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares. The same data for all markets covered in this report can be found on the Internet at <http://ostpxweb.dot.gov/aviation> under "What's Hot."

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare increment. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, American Airlines flew 19,280 passengers between Chicago and White Plains, NY, or 48% of market passengers, at an average fare of \$379. American's *Minimum \$25 Fare Interval* between Chicago and White Plains, NY is \$100; the percent of passengers in that interval was five percent. This means that five percent of American's passengers in this market paid between \$76 and \$100 each way. The \$76 to \$100 fare interval was the lowest in which at least five percent of American's passengers flew. American's *Maximum \$25 Fare Interval* is listed as \$675; the percentage of passengers in that interval was eleven percent. This means that eleven percent of American's Chicago-White Plains passengers paid between \$651 and \$675 each way. The \$651 to \$675 fare interval was the highest in which at least five percent of American's passengers flew. Sixty percent of American's passengers paid more than

\$300 each way (three times \$100, the top of the lowest significant fare interval for American in this market).

Special Feature

Changes in Pricing since Deregulation

The deregulation of the airline industry has inarguably led to consumer benefits. Overall fares are down since the days of regulation, and travelers enjoy more service to more destinations through the spread of both networks and point-to-point service. However, not all markets have benefited equally from deregulation. In this quarter's Special Feature, we use the Standard Industry Fare Level (SIFL) as an objective benchmark against which to compare average fares paid in markets with and without low-fare competition. This same exercise was done in the Special Feature from the second quarter of 1998. Our findings from that study over two years ago remain largely intact. Markets with low-fare competition have average fares at or below the SIFL level at all distances. Markets without adequate price competition from a low-fare carrier experience average fares below SIFL only in long-haul markets that benefit from connecting service.

With the deregulation of domestic air fares in 1978, the Airline Deregulation Act mandated that the Civil Aeronautics Board establish the Standard Industry Fare Level (SIFL), which was equivalent to the lowest unrestricted coach fare charged in each market under regulation. The SIFL, like regulated fares, is a distance-based formula that the CAB adjusted on a biannual basis to reflect changes in airline operating costs. Before the CAB's domestic fare authority lapsed at the end of 1982, the SIFL cost adjustments were used to establish fare level changes that the airlines could implement without CAB approval. The Department of Transportation has continued to update the SIFL on a biannual basis since the dissolution of the CAB. The Department and others have used the SIFL as a benchmark for comparing changes in fares since deregulation. More detailed information on the SIFL calculations can be found at <http://ostpxweb.dot.gov/aviation> under Domestic Aviation.

Average fares and SIFL have been calculated for three sets of distance-grouped markets: all top 1,000+ domestic city-pair markets, the subset of markets within the top 1,000+ that had low-fare competition¹, and the subset of markets within the top 1,000+ that did not have low-fare competition. The attached chart shows average fares for each set of markets as a percentage of the corresponding SIFL measure. As we have observed in past Special Features, the presence of low-fare competition has an unmistakable impact on the average fare level. The difference is most notable in short-haul markets, where low-fare carriers have historically concentrated service.

When considering the aggregate of all top-1,000 markets the following observations are made:

¹ A low-fare market is defined as one in which a low-fare carrier transports at least ten percent of the Origin and Destination traffic. Low-fare carriers include: AirTran, American Trans Air, Frontier, JetBlue, National Airlines, Pro Air, Reno, Southwest, Spirit, Sun Country, Tower, and Vanguard.

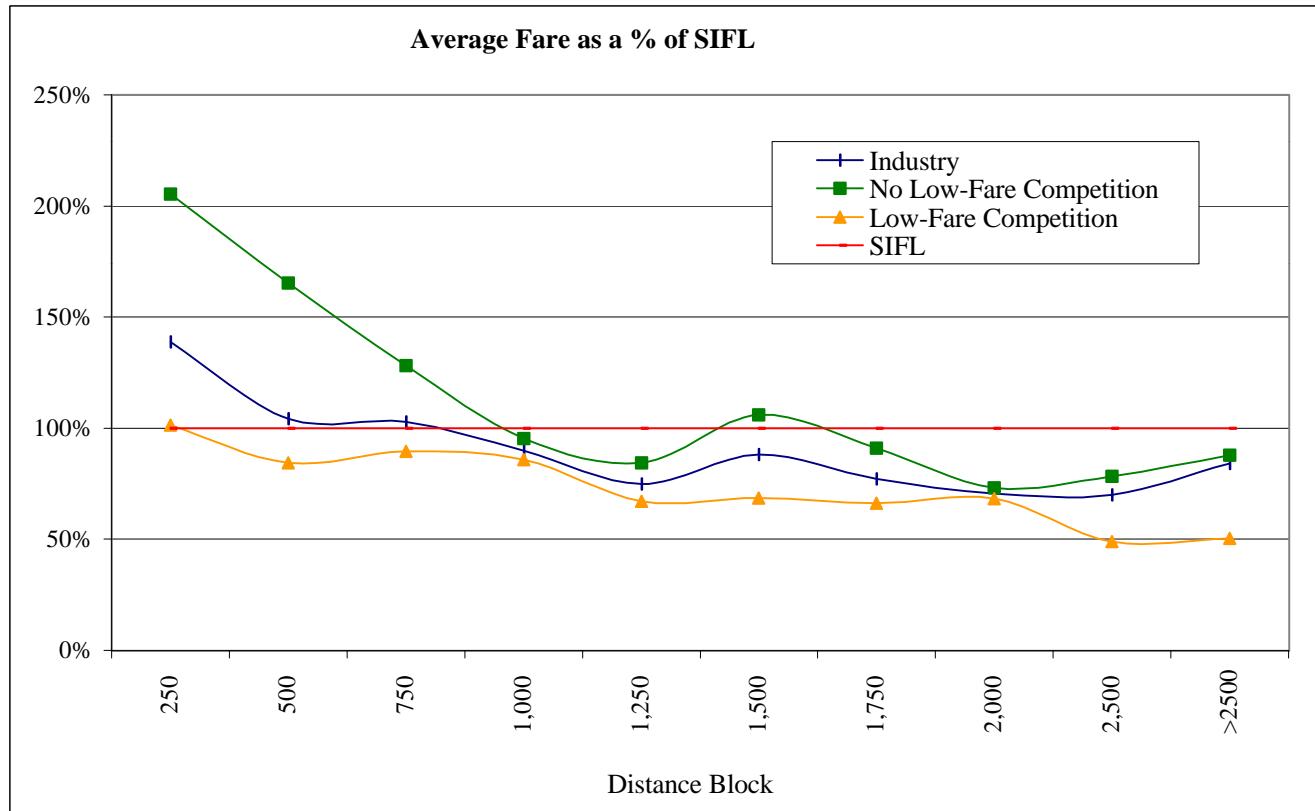

- In top-1,000 markets up to 750 miles, average fares exceed SIFL by varying degrees. They range from 39% above SIFL (in the 0 to 250-mile range) to 3% above SIFL.²
- In top-1,000 markets over 750 miles, average fares fall below SIFL. They range from 70% to 90% of SIFL.

When the top-1,000 markets are divided according to the presence of low-fare competition, however, different trends emerge:

- In markets with low-fare competition average fares were below SIFL in all distance blocks with the exception of the under 250-mile block, where average fares were one percent higher than SIFL. In the two longest distance groupings, average fares were approximately half of SIFL.
- In markets without low-fare competition, average fares of markets that are less than 750 miles are at least 28% above SIFL. In city-pairs under 250 miles, average fares are double SIFL.
- The average fares in the longer-distance categories fall below SIFL, with one exception. In the 1251-1500 mileage block, the average fare is 6% above SIFL. In all other longer-haul categories, fares range from 73% to 95% of SIFL.
- An examination city-pairs in the 1251-1500 mileage block shows that seven of the top ten city-pairs with the highest average fare are Dallas/Ft. Worth markets to either California or the East Coast. A federal restriction called the Wright Amendment prevents Southwest from flying to any of those destinations from its base at Dallas' Love Field, thus limiting the potential for low-fare competition in those city-pairs.

² The components of the SIFL formula are uniformly adjusted to reflect overall changes in the level of operating costs, but not changes in the structure of airline operating costs. Airlines have had much greater freedom in managing costs since deregulation and the relative differences in the costs of operating short distance markets and long distances markets has likely changed.

Third Quarter 2001 Top 1,000+ Origin and Destination Markets, Average Fare by Distance Block vs SIFL

Distance Block										Over 2500

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten-percent sample of passenger tickets. Information in this report extracted from DB1B, using directional components of domestic itineraries (fares passengers only).

- 1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.
- 2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.
- 3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
