
DOMESTIC AIRLINE FARES CONSUMER REPORT

Second Quarter 2003 Passenger and Fare Information

February 2004

U.S. Department of Transportation

FARE INFORMATION FOR CONSUMERS

Each month the Department of Transportation releases an Air Travel Consumer Report that includes information about various service quality elements, including flight delays, mishandled baggage, and oversales, and a variety of other types of consumer complaints.

In response to an increasing number of inquiries from consumers about domestic airline prices the Department decided to release a quarterly fare report. The first such report, for the third quarter of 1996, was released in June 1997.

The initial report provided information about average prices being paid by consumers in the 1,000 largest domestic city-pair markets within the 48 contiguous states. These markets account for about 75 percent of all 48-state passengers and 70 percent of total domestic passengers. Information regarding all 6,192 city-pair markets for the second quarter of 2003 is available at <http://ostpxweb.dot.gov/aviation/>. Once at the site, select the Domestic Issues button, then select the Consumer Airfare Report link.

Table 1 of this report continues to cover the 1,000 largest city-pair markets in the 48 contiguous states. For each of the 1,000 largest city-pair markets, Table 1 lists the number of one-way passenger trips per day, the nonstop distance, the average market fare, and identifies the airlines with the largest market share and the lowest average fare; market share and average fares are provided for both airlines. Average fares are average prices paid by all fare paying passengers. They therefore cover first class fares paid to carriers offering such service but do not cover free tickets, such as those awarded by carriers offering frequent flyer programs.

Airlines tend to offer a wide variety of prices in any given market and it is unlikely that the average fares from this report will be the same as any particular fare offered. Nevertheless, information about average fares charged, including fares charged by dominant carriers and lower-cost competing carriers where available, can provide useful consumer information. Also, fare comparisons between markets allow consumers to further evaluate prices.

In particular, a high average fare in a market is an indication that a broad range of fares is available and that the number of seats sold at low fares are likely to be both very limited and subject to various travel restrictions. In such markets travelers must make extra efforts to get the lowest price for the service they want. Advice laid out in the fact sheet prepared by the Department's Aviation Consumer Protection Division—*Getting the Best Air Fare*—will help consumers accomplish this. This fact sheet can be obtained by requesting a copy at (202) 366-2220 or via the World Wide Web at: <http://airconsumer.ost.dot.gov/publications/bestfare.htm>.

To assist consumers in making average fare comparisons, Table 1 segregates markets by mileage block, since distance is a major factor that affects the level of prices charged. Markets are then sorted within each mileage block by fare amount, from the highest average fare to the lowest. Consumers should understand that because carriers tend to offer a variety of prices in a

market, carriers with higher average prices might offer some seats at prices as low as, or even lower than, carriers with much lower average prices.

The information contained in Table 1 reveals that in many markets the average fares are quite different from carrier-to-carrier. In some instances this reflects differences in service, such as connecting versus nonstop service, or service to different area airports. Note that the “lowest fare carrier” is the carrier with the lowest average fare that has at least a 10 percent share of the traffic in the market, except for markets where only a single carrier has a 10 percent or greater share. In such markets the carrier with the lowest average fare is identified even if its market share is less than 10 percent. In some markets the “market average” fare will be lower than the fare for the ‘lowest fare carrier’ because several carriers that do not individually account for a 10 percent share can collectively account for a significant share. Often they charge lower average fares than individual carriers with greater market participation.

In Table 2, the data are summarized by city. The information provided includes the number of city-pair markets in the top 1,000 in either comparison period that involve each city (e.g., three for Lubbock), the number of passengers traveling to and from each city, the average fare, average fare per mile (yield), and average distance traveled. The data are sorted by distance.

Data are provided for markets that experienced changes in average fares of at least 30 percent compared with one year ago. Markets with large increases are shown in Table 3 and markets with large decreases are shown in Table 4. Each market’s average fare and total passenger count are provided, along with the absolute and percent change in both average fares and passengers.

Table 5 provides detailed fare information for short-haul, high-fare markets. For a more complete explanation, please read the introductory information at the beginning of Table 5 itself.

Table 6, which is available on the Internet only, is the expanded version of Table 1 that lists all city-pair markets that average at least 10 passengers each day.

Table 7 provides fare premiums for airports in the top 1000 city pairs, and demonstrates the impact of low-fare service and hub domination on fare levels.

Footnotes and a key for carrier codes used in this report can be found at the end of the report. This report is also available at <http://ostpxweb.dot.gov/aviation/> in Adobe Acrobat PDF format. Telephone inquiries should be referred to (202) 366-1053.

Table 5 (abridged):
Detailed Fare Information for Highest- and Lowest-Fare Markets Under 750 Miles

As discussed earlier in this report, airlines offer a wide variety of prices in any given market, and it is unlikely that the average fares listed in this report will match any particular fare being offered. A high average fare usually indicates that a broad range of fares is offered in the market. It is likely that low fare seats in these markets are offered in limited numbers, and are subject to various travel restrictions. Fares in markets with low average fares tend to be clustered closely around the average fare. Because only a small percentage of passengers in these markets pay high fares, it is much easier for consumers to find competitive prices. In markets with high average fares, consumers must make extra efforts to get low price service.

The attached table shows detailed fare and passenger data for all city-pairs with a stage length of less than 750 miles that have average fares above \$200. Fare and passenger information is provided for individual competitors in the market. Any airline that carries ten percent or more of the passengers in a market is considered a competitor for the purpose of this report. Following the high-fare markets, identical information is provided for city-pairs with a stage length of less than 750 miles that have an average fare of \$75 or less.

The markets covered in Table 5 were limited in this manner for the sake of brevity. The 750-mile stage length was chosen for demonstrative purposes, because a greater percentage of passengers are affected by fare disparities in short-haul markets with high average fares. The same data for all markets covered in this report can be found on the Internet at <http://ostpxweb.dot.gov/aviation/> under "What's Hot."

For each competitor in the market, the table shows the number of passengers carried, the competitor's market share, and the competitor's average fare. To demonstrate the various levels of fares within these markets, we show the least and most expensive \$25 fare interval available to at least five percent of passengers in the market, along with the percentage of the competitor's passengers that flew in those fare intervals. The fare listed is the top of the \$25 fare interval. The last column shows the percentage of each competitor's traffic that flew at fares greater than three times the least expensive significant fare interval.

For example, US Airways flew 28,000 passengers between Charlotte, NC and Philadelphia, PA, or 87% of market passengers, at an average fare of \$319. US Airways' *Minimum \$25 Fare Interval* between Charlotte and Philadelphia is \$100; the percent of passengers in that interval was fourteen percent. This means that fourteen percent of US Airways' passengers in this market paid between \$76 and \$100 each way. The \$76 to \$100 fare interval was the lowest in which at least five percent of US Airways' passengers flew. US Airways' *Maximum \$25 Fare Interval* is listed as \$525; the percentage of passengers in that interval was seven percent. This means that seven percent of US Airways' Charlotte – Philadelphia passengers paid between \$501 and \$525 each way. The \$501 to \$525 fare interval was the highest in which at least five percent of US Airways' passengers flew. Fifty-seven percent of US Airways'

passengers paid more than \$300 each way (three times \$100, the top of the lowest significant fare interval for US Airways in this market).

SPECIAL FEATURE
2nd Quarter 2003

Low-Fare Service Developments

The growth of low-fare carriers in the domestic market is a phenomenon that has been well documented as has the fact the low-fare carriers have generally had much more success in weathering the airline industry downturn that began in late 2000 than the large network carriers have had. Our Special Features have repeatedly demonstrated the dramatic effect of low-fare entry on fares and traffic in affected markets as well as the huge disparity in fares between markets with and without the price disciplining force of low-fare competitors. The juxtaposition of the financial results of the past three years of the low-fare carriers, on the one hand, and the large network carriers on the other, speaks for itself. Many industry executives and observers have gone on the record stating that they believe that the changes that the airline industry has experienced over the past three years are permanent as opposed to cyclical variations. While only time will tell whether the factors shaping the current airline operating environment are indeed permanent, our recent Special Feature analyses, which focused on low-fare carrier expansion in long-haul markets (3rd quarter of 2002), declining legacy carrier revenue premiums (4th quarter of 2002), and fare structure experimentation (1st quarter of 2003), have highlighted various aspects of how the industry's competitive dynamics are evolving in response to market realities.

In the context of the longer-term competitive structure of the airline industry, a key question for the future concerns the extent to which low-fare carriers will continue to grow. To give the issue some context, Graph 1 below illustrates low-fare carrier¹ traffic and revenue shares of the domestic market² by quarter from the 1st quarter of 1996 to the 2nd quarter of 2003. The graph shows low-fare carrier passenger and revenue shares have grown rapidly since 2000, reaching 27.87% and 18.91%, respectively, by 2Q03.

¹ See Appendix A for a list of carriers considered to be "low-fare carriers" for the purpose of this analysis.

² The "domestic market" is defined here as markets within the contiguous 48 states.

Views differ as to how the competitive structure of the domestic industry will evolve in the coming years. Some industry observers predict that low-fare carriers will eventually account for a large part of the domestic industry while others have a completely different view. Those in the latter group typically point out that only one carrier that began operations in the deregulated era has achieved major carrier status (America West) and the history of the deregulated airline industry is littered with failures. Central to the question of how large the low-fare carriers will grow is the extent to which the low-fare/low-cost model is adaptable to types of markets beyond the short-haul markets large enough to be served primarily on a point-to-point basis that were the genesis of Southwest's model. One new arena in which the low-fare carriers have recently shown a willingness to challenge the large network carriers is in non-stop transcontinental markets.³ However, the low-fare carriers have been accused of cherry-picking the largest markets while ignoring smaller communities.

Current market developments are, however, testing the viability of the low-fare model in smaller markets. Most of the large low-fare carriers operate at least some service to smaller cities with their own large jet equipment. Furthermore, AirTran, ATA, and Frontier, the three low-fare carriers that operate traditional hub-and-spoke systems, already have regional affiliates that provide them with aircraft appropriately sized for service in smaller markets. AirTran contracts with Air Wisconsin for 50-seat regional jet service both on spoke routes out of its Atlanta hub as well as on point-to-point routes that bypass Atlanta. ATA's regional affiliate, Chicago Express, operates 34-seat turboprops between ATA's hub at Chicago Midway and smaller cities in the Midwest. Frontier contracts with Horizon to provide Frontier branded regional jet lift to support its Denver hub. Frontier also has a marketing relationship with Great Lakes Aviation whereby the Frontier code is placed on Great Lakes flights between Denver and more than 30 small communities. Passengers can then connect in Denver to other flights across the Frontier system.

Other developments portend additional low-fare service to smaller cities. In June, JetBlue announced, in defiance of conventional wisdom regarding low-cost carrier fleet planning, that it would add a second aircraft type. The first of these 100-seat Embraer 190 aircraft is scheduled for delivery in 2005. The Embraer 190's size will greatly increase the number of potential markets into which JetBlue can expand as it will make markets that were too small to support service with JetBlue's 156-seat A320s economical for the carrier. Additionally, Atlantic Coast has announced plans to transform itself into an independent, low-fare carrier based at Washington Dulles called Independence Air. One of the elements of Independence Air's business plan includes using regional jets to provide low-fare service to smaller cities, including cities it currently serves under contract for United that do not have any service by low-fare carriers at present.⁴

No one knows how high the low-fare carriers' share of the domestic market will ultimately reach. The market will determine whether the low-fare model is economically viable in smaller markets. In the meantime, in an effort to inform the debate, we consider below several issues with respect to service offered by low-fare carriers.

Low-fare carrier service to small hub and non-hub cities

While it is true that the majority of the cities served by the low-fare carriers are large cities, and that the number of small cities served by low-fare carriers is much smaller than the number served by each of the major network carriers, evidence suggests certain low-fare carriers nonetheless generate a large proportion of their overall domestic traffic and revenue in smaller markets.⁵ Table 1 below lists the small

³ See our Special Feature for the third quarter of 2002.

⁴ The business plan also calls for the acquisition A319s and A320s to fly routes from Washington Dulles to large west coast cities.

⁵ As a proxy for city size, we used the FAA's hub size definitions for the year 2001. See <http://www1.faa.gov/arp/planning/stats/index.cfm> for more information. While these airport size definitions generally work well as a stand-in for city size, there are certain small hub and non-hub airports served by low-fare carriers that are located in or in close proximity to large metropolitan areas. Since the purpose of this section is to

and non-hub airports served by each of the six largest low-fare carriers as of the second quarter of 2003. Table 2 provides the proportion of each low-fare carrier's domestic traffic derived from airport pair markets where the origin and/or the destination are/is one of the small or non-hub airports listed in Table 1.

| Table 1: Small Hub & Non-hub Airports Served by Low-fare Carriers During 2Q03* | |
|---|--|
| Carrier | City |
| AirTran | Bloomington/Normal, IL; Dayton, OH; Flint, MI; Greensboro, NC; Gulfport, MS; Moline, IL; Myrtle Beach, SC; Newport News, VA; Pensacola, FL; Rochester, NY; Savannah, GA; Tallahassee, FL; Wichita, KS |
| ATA | Cedar Rapids, IA; Dayton, OH; Des Moines, IA; Flint, MI; Grand Rapids, MI; Lexington, KY; Madison, WI; Moline, IL; Sarasota/Bradenton, FL; South Bend, IN; Springfield, IL; Toledo, OH |
| Frontier | Alamosa, CO; Alliance, NE; Amarillo, TX; Boise, ID; Casper, WY; Chadron, NE; Cheyenne, WY; Cody, WY; Cortez, CO; Dickinson, ND; Dodge City, KS; Durango, CO; El Paso, TX; Farmington, NM; Garden City, KS; Gillette, WY; Grand Island, NE; Hays, KS; Kearney, NE; Laramie, WY; Liberal, KS; McCook, NE; Moab, UT; Norfolk, NE; North Platte, NE; Page, AZ; Pierre, SD; Pueblo, CO; Riverton, WY; Rock Springs, WY; Santa Fe, NM; Scottsbluff, NE; Sheridan, WY; Telluride, CO; Vernal, UT; Wichita, KS; Williston, ND; Worland, WY |
| JetBlue | Burlington, VT; Rochester, NY; Syracuse, NY |
| Southwest | Albany, NY; Amarillo, TX; Birmingham, AL; Boise, ID; Corpus Christi, TX; El Paso, TX; Harlingen, TX; Jackson, MS; Little Rock, AR; Lubbock, TX; Midland, TX; Norfolk, VA; Spokane, WA; Tulsa, OK |
| Spirit | Atlantic City, NJ; Myrtle Beach, SC |

Table 2: Low-fare Carriers' Share of Total Domestic Traffic and Revenue Generated in Airport-Pair Markets Where the Origin and/or the Destination is a Small Hub or Non-hub Airport*

| Carrier | Traffic Share 2Q01 | Traffic Share 2Q03 | Rev Share 2Q01 | Rev Share 2Q03 |
|-----------|--------------------|--------------------|----------------|----------------|
| AirTran | 31% | 28% | 30% | 27% |
| ATA | 9% | 13% | 9% | 13% |
| Frontier | 2% | 3% | 2% | 3% |
| JetBlue | 20% | 10% | 16% | 8% |
| Southwest | 15% | 14% | 15% | 15% |
| Spirit | 30% | 26% | 27% | 25% |

*Excludes Akron-Canton, OH (CAK), Long Island MacArthur, NY (ISP), Long Beach, CA (LGB), Manchester, NH (MHT), and St. Petersburg/Clearwater, FL (PIE) as explained in footnote 5.

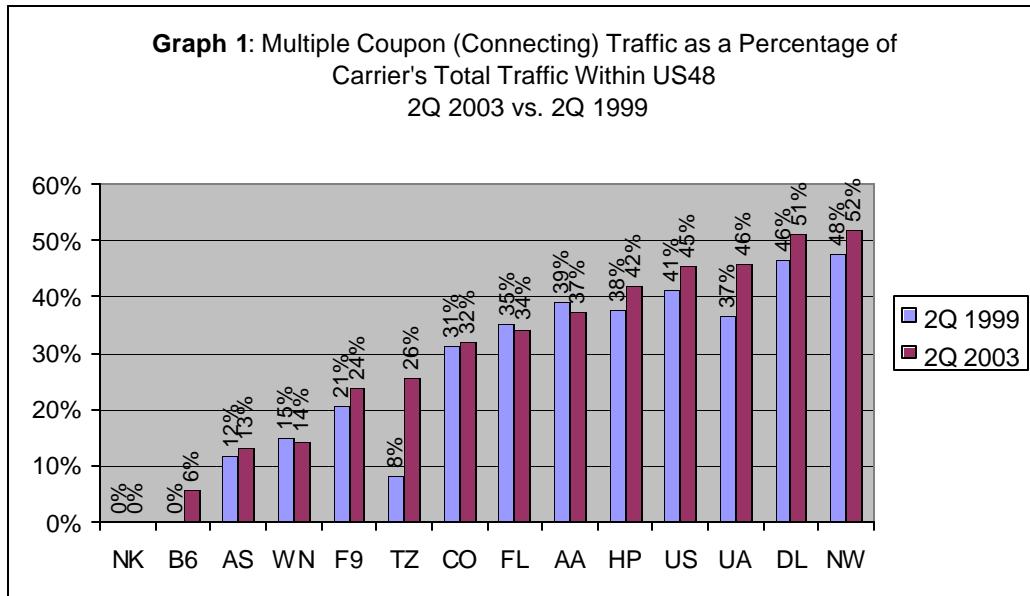

Table 1 illustrates that the three low-fare carriers with traditional hub-and-spoke systems all offer service to at least ten small hub or non-hub airports. More than ten of the fifty-nine airports currently served by Southwest are small or non-hub airports. Table 2 shows that certain low-fare carriers generate a substantial portion of their total revenue and traffic in small hub and non-hub airport markets. During the second quarter of 2003, AirTran generated 28% of its traffic and 27% of its revenue in small city markets. Spirit generated a like amount of its traffic and revenue in small city markets, both major leisure travel destinations.

Low-fare carrier connecting service

As a result of their traditional focus on large markets that can sustain non-stop service, low-fare carriers have established a reputation as being "point-to-point" carriers. Graph 2 illustrates the proportion of each

illustrate the level of low-fare service in smaller communities, the following such airports were removed from this analysis: Akron-Canton, OH (CAK), Long Island MacArthur, NY (ISP), Long Beach, CA (LGB), Manchester, NH (MHT), and St. Petersburg/Clearwater, FL (PIE).

airline's domestic traffic carried on a multiple coupon⁶, or connecting, basis in both 2Q1999 and 2Q2003. This graph demonstrates that certain low-fare airlines carry substantial amounts of connecting traffic.

Spirit is correctly classified as a point-to-point carrier since virtually none of its sample passengers in the 2Q03 traveled on multiple coupon itineraries. JetBlue is primarily a point-to-point carrier as well. In 2Q03, 73% of JetBlue's domestic traffic and 76% of its domestic revenues were derived from origin and destination markets involving New York JFK, where the airline has its home base. AirTran, however, connects passengers through its Atlanta hub at a similar rate as Continental does through its system. Both Frontier and, especially, ATA have grown their connecting traffic as they have added destinations and developed their hubs at Denver and Chicago Midway, respectively. Even Southwest, which is usually characterized exclusively as a point-to-point carrier, carries roughly one in seven passengers on a connecting basis.

Low-fare carrier growth

As indicated in Graph 1 above, low-fare carriers' passenger and revenues shares of the domestic market stood at 27.87% and 18.91% respectively as of the 2Q03. The low-fare carriers have grown in spite of the industry's downturn and apparently plan to continue to grow at a rapid pace as evidenced by the large number of aircraft they have on order. As mentioned above, JetBlue placed an order for 100-seat aircraft in mid-2003. In April 2003, it also ordered 65 additional A320s. Taking into account these new orders as well as its pre-existing orders, JetBlue has firm orders for almost 200 aircraft for delivery between 2004 and 2011. Southwest has more than 120 airplanes on firm order for delivery over the next five years and plans to take delivery of 47 aircraft in 2004 alone. In July, AirTran ordered 50 737s plus took 50 737 options, in addition to ordering up to 10 more 717s. Frontier expects to grow its fleet 60% by 2008.

⁶ Passengers that did not travel on multiple coupon itineraries did not necessarily travel non-stop. Single coupon itineraries include both non-stop itineraries as well as direct itineraries (where a stop is made but no change of plane is required). Southwest, in particular, offers a great deal of linear, direct service that appears in the O&D survey as single coupon service.

Graph 2, on page 6, depicts the low-fare carriers' share of traffic by distance/density block⁷ in 2Q1995 compared to 2Q2003. Graph 2 illustrates that the low-fare carriers have not only increased their traffic share in markets where they already had a substantial presence in 1995, namely in dense, short-haul markets, but have also expanded into new market segments including longer-haul markets and less dense markets. Low-fare carrier growth in the two longest distance blocks has been particularly dramatic, particularly in dense, long-haul markets. For example, in the greater than 2500 miles/greater than 500 passengers per day distance/density block, the low-fare carriers' share of traffic rose from less than 1% in 2Q1995 to almost 17% in 2Q2003. While the low-fare carriers have expanded into market segments beyond the dense, short haul markets in which they were firmly established in 1995, their share of the traffic in other segments is still relatively small.

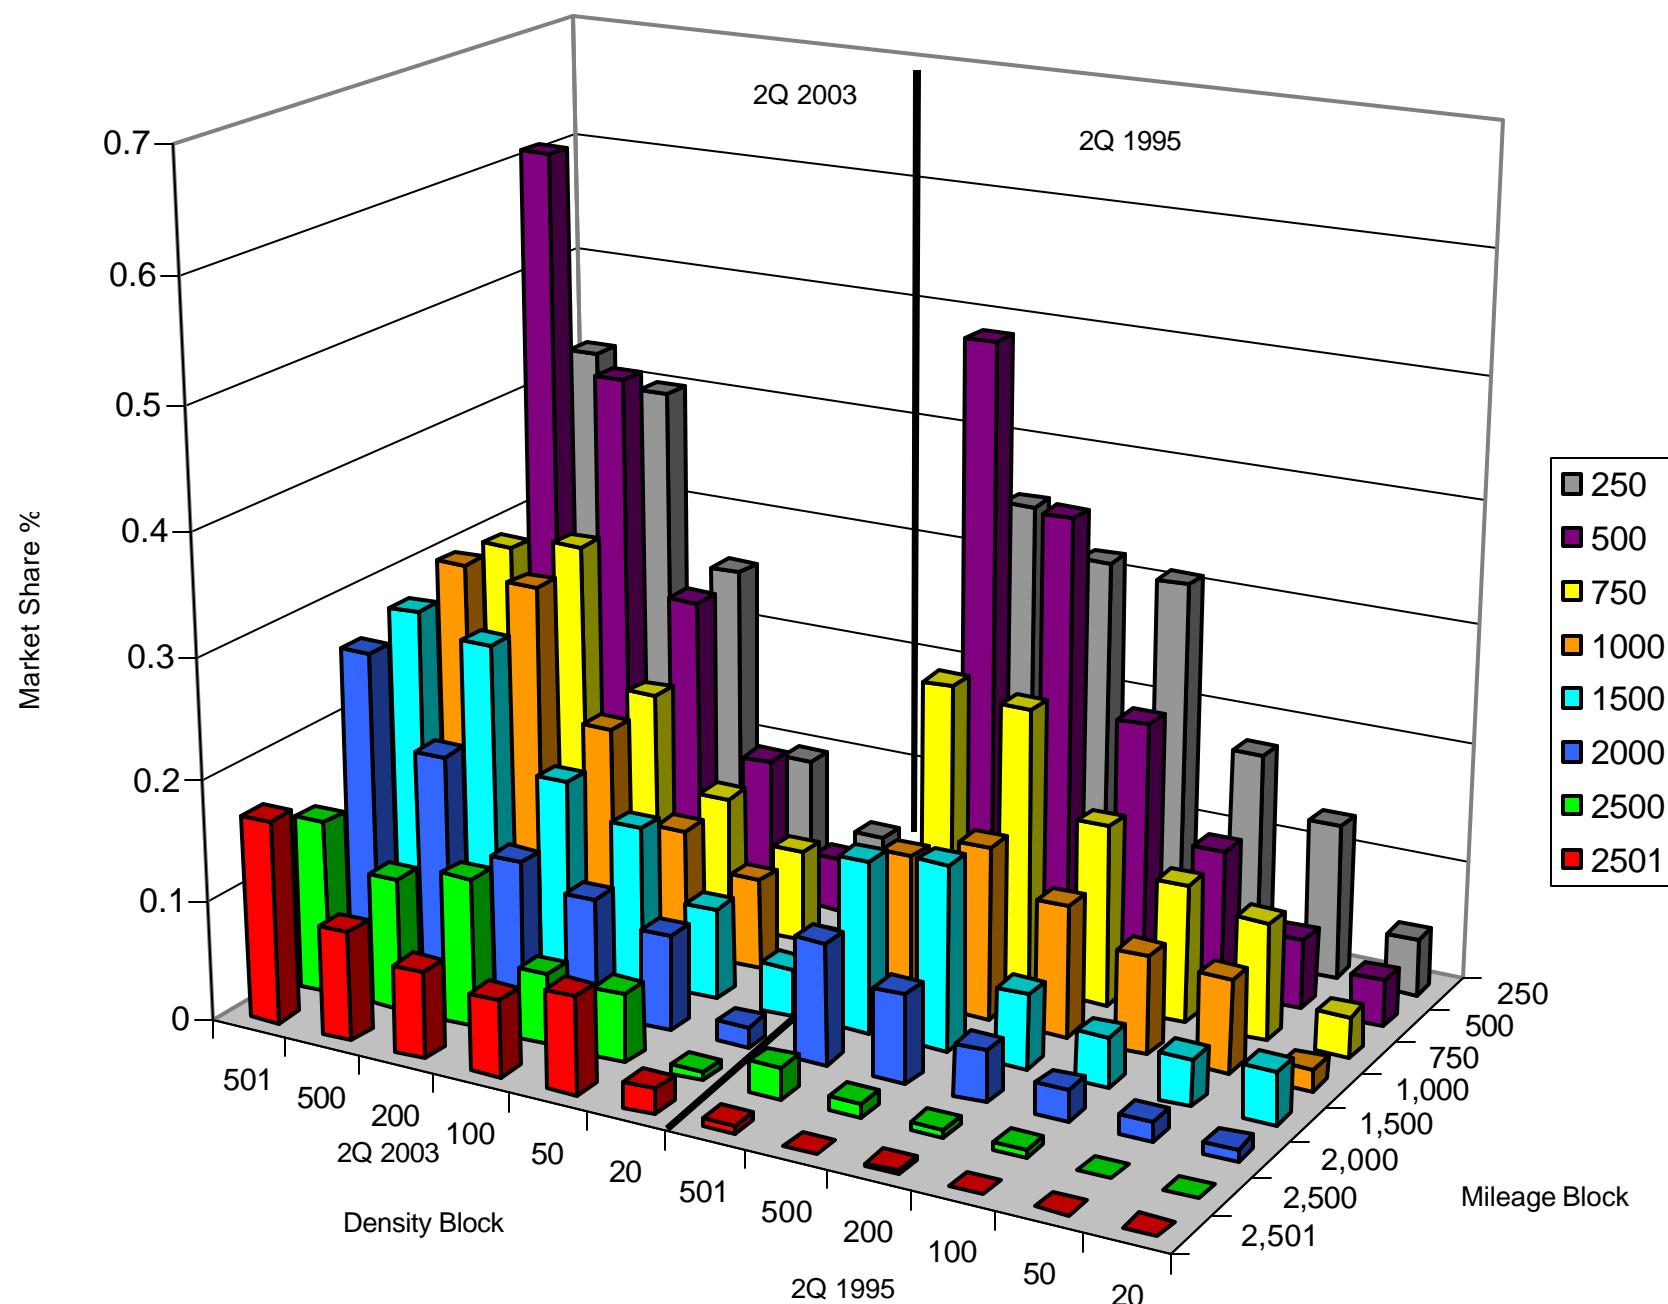

Another point is low-fare carrier entry is increasingly occurring at major, primary airports, not just at so-called secondary or alternative airports. Boston Logan (JetBlue), Las Vegas (AirTran), Los Angeles (AirTran), Philadelphia (Southwest), San Francisco (AirTran), and Washington National (AirTran and Spirit) have all either seen entry by an additional low-fare carrier recently or will see the entry of an additional low-fare carrier in the next six months.

Conclusion

A key determinant of the future structure of the domestic airline industry is to extent to which the low-fare model can be successfully extended on a sustainable basis beyond the dense, short-haul markets that, until recently, constituted the traditional market segment on which low-fare carriers focused. Although views differ as to how large the low-fare carriers' share of the domestic market will ultimately grow, the number of aircraft on order by the current group of low-fare carriers indicates substantial low-fare growth is planned over the next ten years. These aircraft orders do not even speak to any low-fare growth that may be driven by new low-fare entrants, including those with new types of business models. In an effort to inform this debate, this Special Feature addressed three related issues concerning domestic low-fare service. The first issue was low-fare carrier service to small hub or non-hub cities. Our analysis indicates that, while the number of small cities served by low-fare carriers is much smaller than the number served by legacy carriers, certain low-fare carriers generate significant proportions of their traffic and revenue in smaller markets. Issue two was low-fare connecting service. Our analysis illustrates that certain low-fare airlines carry considerable amounts of connecting traffic. The third issue was low-fare carrier growth. Our analysis shows that not only have low-fare carriers grown in market segments in which they were present in large numbers in 1995, primarily dense, short-haul markets, some have expanded into new market segments, such as less dense and longer-haul markets. Despite the low-fare carriers' rapid growth, there remain numerous large markets where the low-fare carriers have not yet gained a competitive foothold. Furthermore, the low-fare carriers' share of traffic in the new market segments into which they have expanded since 1995 is relatively low compared to market segments in which low-fare service was firmly established in 1995.

⁷ For this analysis, the market definitions were expanded to include traffic at both primary and secondary airports (e.g. the "Boston market" includes Boston Logan, Manchester, and Providence, the latter two of which are served by Southwest). See Appendix B for the list of airports that make up each city as defined for this analysis. Also, in order to facilitate "apples-to-apples" market comparisons between the two time periods, a given market's placement in the distance/density matrix was based on that market's distance and density in 2Q03. The increased traffic volume generated by low-fare entry often shifts markets into higher density blocks.

Data Source:

Origin and Destination Survey of Airline Passengers submitted by certificated airlines. A ten-percent sample of passenger tickets. Information in this report extracted from DB1B, using directional components of domestic itineraries (fares passengers only).

1/ Limited to carriers with a 10 percent or greater share of the market. In markets where only a single carrier has a 10 percent or greater share we have shown the lowest fare for any carrier that accounts for one percent or more of total traffic.

2/ Airlines tend to offer a wide variety of fares in any given market. Carriers with higher average prices may offer some seats at prices as low as, or even lower, than carriers with much lower average prices.

3/ Average fare per mile computed by dividing the average fare by the average passenger trip length.
