The year is 2045.
The year is 2045.

A driver sits in traffic for hours, which may have been common in Los Angeles a generation before.

But this particular driver lives in Omaha, Nebraska.

In 2045, Omaha is the new LA.

Half a country away, a businesswoman boards the train on the Long Island Rail Road.

The day before, that same train was already too full to board and bypassed her station. So did the next train.

Now, the woman wonders not just when she will get to work...

But if she will get there at all.
America’s transportation system is a fossil in 2045.

In Asia, electric buses travel endlessly without refueling because they receive their power wirelessly.

In Europe, driverless cars zoom around the highways, and because the technology is so safe, car crashes are as much a part of the past as horse-and-buggy accidents.
But in the United States, these technologies are little more than novelties. They are not in wide use because the government did not encourage them or put a plan in place to regulate them.

This could be the future we’re heading for, according to Beyond Traffic, a new study from the U.S. Department of Transportation.
But *Beyond Traffic* also tells us:

We can chart a **BETTER** course.

We can build a transportation system as **AMAZING** as the other is terrifying.
Imagine eliminating \textbf{9 out of every 10} car crashes.

That’s the bright promise \textbf{driverless technology} holds over the next 30 years.

Imagine your plane never has to circle the airport again, because flights are \textit{perfectly timed} and the skies are \textit{clear of congestion}.

This is the potential of “\textit{NextGen}” air traffic control systems.
Imagine that **ANYONE** can reach **ANY** job, even **without** a car.

Imagine that **ANY** business can open **ANYWHERE**, and know customers will be able to get there.

That’s the transportation system *Beyond Traffic* says we can build.

*Beyond Traffic* looks at the latest data and anticipates the trends and choices facing our transportation system over the next three decades.
But in the end, it does not provide a roadmap that leads to one future. Or another.

*Beyond Traffic* is not a *blueprint*, telling us how to build our transportation system. Instead, it is the *blue paper*. The thing on which we can begin asking the **BIG** questions, looking at the **BIG** trends, and – *hopefully* – inspiring some **BIG** minds to come up with some **BIG** answers.
|How will we move?|
How will we build a transportation system that doesn’t just let a growing population travel – but lets them travel SAFER than ever?

|How will we move things?|
How will we reduce freight chokepoints that drive up the cost of owning a business?

|How will we move better?|
How can we knock down barriers to new technologies that promise to make travel safer and more convenient?

|How will we adapt?|
How do we make our infrastructure more resilient for a time when weather events like Hurricane Sandy will occur with increasing frequency?

|How will we align decisions and dollars?|
How can we invest the trillions of dollars our transportation needs in the smartest way possible?

*Beyond Traffic* does not close the book on these questions. IT OPENS THE BOOK WIDER

Giving all of us more and better data with which to answer them.
Think of *Beyond Traffic* as an invitation ...
...which means **ANYONE** can help build its future.

We want to hear from **YOU.**
In 30 years, how will you travel?

Share your ideas at www.dot.gov/beyondtraffic

But first, turn the page.

And find out more about the trends and choices ahead of us.
How will we move?

Population Increase
2015: **320 million people**
2045: **390 million people**

In 30 years our population is expected to grow by about **70 million**

... that’s more than the current populations of **NY, TX, FL**

Older Americans — Redefining Longevity
By 2045, the number of Americans over age 65 will increase by **77%**

About **one-third of people over 65** have a disability that limits mobility. Their access to critical services will be more important than ever.

Income Inequality
10% of the population takes home **one-third** of our national income. Transportation is the **second-largest** expense for U.S. households.

Millennials — Shaped by Technology
There are **73 million Millennials** aged 18 to 34. They are the first to have access to the internet during their formative years and will be an important engine of our future economy.

Megaregions and Shifts in Population Centers
11 megaregions are linked by transportation, economics, and other factors. They represent over **75%** of our population and employment.

In 2014, **365,000** people moved to the South—up **25%** from 2013—and moves to the West doubled.

Bumper-to-Bumper
On average, we spend **over 40 hours** stuck in traffic each year

The annual financial cost of congestion is **$121 billion**

Millennials are driving less. By the end of the 2000s, they drove over **20% fewer** miles than at the start of the decade.

Other

How will we move things?

Transportation and the Economy
By 2045, the U.S. economy is forecast to grow by 115% to $36.7 trillion—and the transportation sector will represent about $1.6 trillion of total Gross Domestic Product.

Global Demand for U.S. Products
Global trade is one of the brightest spots in our economy. U.S. exports reached $2.3 trillion in 2013, setting a new record for the 4th freight year. $1 billion in exports = 5,000 U.S. jobs

The U.S. energy boom is placing unprecedented demand on our transportation system. Crude oil production is up 50% since 2008. Rail carried 400,000 carloads of crude oil in 2013. 42x the 9,500 carloads of crude oil in 2008.

By 2040, U.S. freight volume will grow to 29 billion tons—an increase of 45%.

By 2040, the value of freight will grow to $39 trillion—an increase of 125%.

Freight Movement is Multimodal
Every mode of transportation moves freight, but trucking is the primary mode of freight travel.

System Performance and the Cost of Congestion
By 2040, nearly 30,000 miles of our busiest highways will be clogged on a daily basis. Truck congestion wastes $27 billion in time and fuel annually.

</tr>
</tbody>
</table>

By 2040, nearly 30,000 miles of our busiest highways will be clogged on a daily basis. Truck congestion wastes $27 billion in time and fuel annually.

54 million tons of freight move across our nation every day.
How will we move better?

More and more, the transportation sector is relying on data to drive decisions, and on technology to reimagine how we move people and goods.

**Connected Vehicles**

Vehicles that communicate are the latest innovation in a long line of successful safety advances.

The motor vehicle fatality rate has dropped by **80%** over the past 50 years.

Connected vehicles and new crash avoidance technology could potentially address **81%** of crashes involving unimpaired drivers.

**Robotics**

Advances in robotics are changing transportation operations and will impact the future transportation workforce.

Robots will perform vital transportation functions, such as critical infrastructure inspection.

**NextGen**

GPS and new technologies are leading to a safer, more efficient U.S. airspace.

By 2020, one-second updates will pinpoint the aircraft location and speed of 30,000 commercial flights daily.

**Real-time Travelers**

Mobile access to everything from traffic data to transit schedules informs our travel choices.

90% of American adults own a mobile phone.

20% use their phones for up-to-the-minute traffic or transit information.

Smartphones are regularly used for turn-by-turn navigation.

**Big data** is all around us. Global data generated is projected to grow by **40%** annually.

Data enables innovative transportation options, such as car-sharing, ride-sharing, and pop-up bus services, and more rapid delivery of goods.
Our changing climate is disrupting transportation systems in the U.S. and abroad.

100-year devastating storms used to occur once a century ...

... but with the climate changing, they could occur every 3 to 20 years (by 2080).

We’re Heating Up

Average U.S. temperatures are rising.

By 2050, our temperature is predicted to rise 2.5°F

Scientists say we need to avert a 2°F increase in temperature to avoid the most catastrophic impacts of climate change.

In extreme heat:

Roads deteriorate faster

Truck tires are prone to blow out

Rail track buckles

Runways soften

Inland waterway traffic is disrupted during droughts

Globally, the 10 warmest years have occurred since 1998

U.S. droughts and western wildfires cost $30+ billion in 2012 alone

Rising Sea Levels Will Disrupt Transportation

Superstorm Sandy’s surge damaged electrical systems, highways, rail track, runways, and port cargo. The cost to the U.S. economy was an estimated $65 billion.

U.S. Airport Elevations

Sea level is projected to rise up to 1 foot (2045)

Sea level is projected to rise up to 4 feet (2100)

The transportation sector is the second-biggest source of greenhouse gases (GHGs) in the U.S.

Transportation emits 28% of GHGs

New stronger fuel economy standards will double the efficiency of our cars and trucks. Corporate Average Fuel Economy Standards have saved 14 billion tons of CO₂ emissions since 1970.

1979 19.0 MPG

2016 34.6 MPG

2021 41.1 MPG
How will we align decisions and dollars?

**Transportation Investment**
Improving the condition and performance of the transportation system will cost $120 billion for highways and bridges between 2015 and 2020. Current annual spending at all levels of government—federal, state and local—is just $83.1 billion.

$43 billion for public transportation. Meanwhile, annual capital spending is just $17.1 billion.

**Oregon Pilots Road User Charges**
Oregon is one of many States seeking new revenues to make up for transportation budget shortfalls. During a recent pilot program in Oregon, participants paid 1.56 cents per mile driven rather than a state tax of 30 cents per gallon of gasoline.

**To compete in the global economy**, the U.S. needs a world-class transportation system. Some of our most critical transportation infrastructure is crumbling.

65% of U.S. roads are in **less than good condition**.

25% of U.S. bridges need significant repair or can’t handle today’s traffic.

50% of locks and chambers are more than 50 years old.

**Overall U.S. Infrastructure Grade**

D+

**Our World Standing**

Quality of roads 2008 8th

Quality of roads 2014 16th

**Transportation Spending is in Decline**
Our highway and mass transit accounts are trending toward the red. The Federal gas tax is no longer enough to address our transportation needs.

**The Federal gas tax has not increased for over 20 years**...

1993 1¢/gal

2015 1¢/gal

... and the value of the dollar has declined.

**Transportation Trust Fund projected annual shortfall**

Transit -$4 billion

Highway -$12 billion
